## **New intelligent software for veterinarian and farmer**

VetAsyst offers real-time data in the cloud for chain management and optimization

**LH Vet Group and the founders of AgriSyst start the development of smart software to support veterinarians and livestock farmers under the name VetAsyst. VetAsyst offers an interactive link between veterinary information and smart farming data from the barn, creating valuable new management information to improve health, welfare and profitability in livestock farming. The system can actively cooperate with management systems and other data sources from veterinarians, livestock farmers and other chain partners.**

VetAsyst offers a platform in which every veterinarian and farmer is invited to participate. This platform is the answer to the growing demand from chains, retail and consumers for transparency and traceability from farm to fork. In addition, VetAsyst reduces the administrative burden of veterinary procedures for both veterinarians and farmers in Europe. The software is accessible via app and PC.

LH Vet Group is a chain of veterinary practices for farm animals in the Netherlands, Germany and Belgium. In the Netherlands they operate under the name Lintjeshof, in Germany under Agro-vet and TPB Blumberg. Commercial director Marcel Koppens of Lintjeshof: "The regular practice management systems are valuable for the management and control of our veterinary practices. However, we have specific wishes for our work in livestock farming. With this step, we are focusing on a new platform in which the veterinarian and livestock farmer can work together. For example, by linking veterinary information with data from the farm. Smart farming requires smart data links in the production chain, and animal health is an essential part of this. We are convinced that VetAsyst will make a major contribution to this."

AgriSyst serves the majority of enterprising pig farmers in the Netherlands and Germany and is active in almost all EU countries and beyond with the PigExpert and AgriSyst Monitoring Service management system. Commercial director of AgriSyst, Twan van Dijk, explains that the activities of VetAsyst tie in very well with the activities of AgriSyst. "AgriSyst is a leader in the field of simple and error-free recording and monitoring of data in the barn. As a result, we make valuable management information available to realize extra returns. There is a great international demand for the complete digitization of the veterinary administration, from both livestock farmers and veterinarians. This is of great importance for the future of livestock farming. That is why we want to develop this platform for all veterinarians and farmers."

VetAsyst: for smart farmers and smart vets
